Desktop and Enterprise Synchronization

Synchronizing your tasks, next actions, contexts, projects and someday/maybe lists with other applications (e.g. Microsoft Outlook® / Exchange® / Entourage®, Lotus Notes®, Novell Groupwise®, Act!, iCal, etc.) is vital. Our products provide a broad range of functionalities combined with the capability to synchronize your tasks with nearly every kind of task management system you can imagine.

* GTD® tasks / actions require just the state "done" and "undone". 5 stages include task states: not started, in progress, completed, waiting, deferred.

** Synchronization of the BlackBerry's internal task database utilizing standard synchronization methods provided by the BlackBerry® Desktop Manager, BlackBerry® Enterprise Server (BES®) or your wireless network carrier.

*** Due Dates and Reminders are not GTD® specific. For the matter of simplicity and productivity improvement due dates are not used in our products for implementing GTD®.

**** Integrating with 3rd party GTD® applications is supported. An example would be the context, project, and action compatibility between NextAction! and eProductivity for Lotus Notes®.

1) Due to the fact that TaskMaster does not support projects and someday/maybe lists such data does also not integrate with other 3rd party applications.
